Box PATENT APPLICATION

Assistant Commissioner For Patents

Washington, D.C. 20231

Sir:

Transmitted herewith for filing is the utility patent application of inventor(s): **James D. Hempleman, et al.** and entitled: **LIST BUILDING SYSTEM**

1. Enclosed are:

- ☒ A duplicate copy of this transmittal letter.
☒ One stamped, self-addressed postcard for the PTO Mail Room date stamp.
☒ One utility patent application containing pages 1-18, and
☐ an executed declaration or oath for the utility patent application including a power of attorney,
☒ an unexecuted declaration or oath for the utility patent application including a power of attorney, and
☒ drawings: ☐ 1 copy of _____ sheets of formal drawings, OR
☒ 1 copy of 32 sheets of informal drawings, OR
☐ 1 set of _____ Bristol board sheets of original, formal drawings.
☐ A certified copy of a _____ application, No. _____.
☐ An associate Power of Attorney.
☐ An Information Disclosure Statement.
☐ _____ Verified Statement(s) relating to small entity status.
☐ Other: _____

2. The filing fee has been calculated as shown below:

	(Col. 1)	(Col. 2)
For:	Number Filed	Number Extra
Basic Fee		
Total Claims	- 29	= 9
Independent Claims	- 4	= 1
Multiple Dependent Claim Presented		

* If the difference in Col. 1 is less than zero, enter "0" in Col. 2.

SMALL ENTITY		OTHER THAN A SMALL ENTITY	
Rate	Fee	Rate	Fee
	\$385.00	OR	\$770.00
x \$ 11 =	\$	OR	x \$ 22 = \$
x \$ 40 =	\$	OR	x \$ 80 = \$
+ \$130 =	\$	OR	+ \$260 = \$
TOTAL	\$	OR	TOTAL \$

- ☐ Please charge my Deposit Account No. 04-1644 in the amount of \$ _____.
☐ A check in the amount of \$ _____ to cover the filing fee is enclosed.
☐ The Commissioner is authorized to charge payment of the following amounts associated with this communication or credit any overpayment to Deposit Account No. 04-1644:
☐ Additional filing fees under 37 CFR 1.16 or deficiencies in remittances therefor.
☐ Additional processing fees under 37 CFR 1.17 or deficiencies in remittances therefor.
☐ **ONLY if applicant has partially paid** the patent issue fee under 37 C.F.R. §1.18, then the **deficiency** shall be charged to Deposit Account No. 04-1644, and the Commissioner if authorized to so charge the Deposit Account.

3. The enclosed utility patent application is related to: _____

Date: May 21, 1997

Attorney's Signature

Name and Reg. No. Paul M. Vargo, Registration No. 29,116

LIST BUILDING SYSTEM**Field of the Invention:**

5 The invention pertains to software driven systems and methods for developing audio/video sequences. More particularly, the invention pertains to such system and methods wherein a user can create an editable list of works which can be presented.

Background of the Invention:

10 With the advent of CDs a wide variety of music, music videos or video sequences are conveniently available for a user in a non-analog, digital format. The advantages of digital recording of both audio and video have been recognized and are to a great extent realized with the ready availability of pre-recorded CDs.

15 While convenient, pre-recorded CDs present a problem to a user in that while it is possible to select sequentially between the pre-recorded works on a given CD, to switch to another artist or group it is necessary to have multiple drives available or to remove one CD and insert another at the appropriate time. While possible, such arrangements are at the very least inconvenient. In addition, because of the delays inherent in switching from one CD to another, the audio or video output might be lost for an undesirably long period of time thereby detracting from the ambiance afforded by the performance. In addition, listeners at times are only
20 interested in one or two of the tracks on a CD in a given situation.

25 There thus continues to be a need for systems and methods which will make it possible to combine works by a variety of performers or artists in a relatively arbitrary fashion and to present those works in a given sequence in a fashion that is convenient but which at the same time is cost effective. It would also be desirable to be able to use widely available personal computers as control elements in such systems.

Summary of the Invention:

30 A system and a method of arranging media elements for later replay make it possible to create new sequential presentations of the elements. The elements can be obtained from a local medium such as a CD, or a video tape.

Alternately, the elements can be obtained from a remote location via wired or wireless transmission. Elements can include audio works such as music or audio/visual works including advertisements, music videos or other types of elements.

5 The elements can be stored on a readable digital storage medium. Some or all of the elements can be played back or performed individually.

A collection of separate elements can be identified and arranged. One form of arrangement is a list. Another is a non-linear tree-like arrangement.

10 The collection can be played back or performed sequentially as specified in a list. Alternately, the elements can be performed interactively as specified in a tree. In this embodiment, tree nodes represent decision points for a viewer or a listener.

15 A graphically-oriented editor is provided for building or editing lists or trees. The lists or trees can be stored and subsequently retrieved for editing or performing the collected media elements.

20 Output can, in one aspect, be an audible or a visible performance of the elements in accordance with a selected list or tree. In another aspect, the collection can be written to a medium. Hence, a CD or other digital medium can be written, or audio or video tapes can be recorded. The output medium is not a limitation of the invention.

25 In yet another aspect, a system incorporating a card reader or a vending unit can be used to build a list of elements. In this instance an appropriate credit needs to be established before an element can be added to an on-going collection being performed.

Subsequent to a credit being established and a selection or selections made in accordance with the credit, elements can be added to the list and performed. Elements can be exclusively audio. Alternately, elements can include both audio and video components without limitation.

In yet another aspect, the method includes building a list of media elements which can come from a variety of sources. Preferably, the media elements are storable in a digital format.

5 Subsequently, the list can be reviewed visually by a user and either modified or edited for the purpose of creating a sequence of media elements to be replayed or presented. Subsequently, the list is executed and the elements are either presented audibly or visually or both in accordance with their characteristics.

10 In a further aspect, a digitized inventory of media elements can be created by either reading a local digital medium, such as a CD ROM or by receiving, via wireless transmission, digitized sequence of works which can then be stored in the inventory. If desired, the user can preview some or all of any element in the inventory.

15 Numerous other advantages and features of the present invention will become readily apparent from the following detailed description of the invention and the embodiments thereof, from the claims and from the accompanying drawings.

Brief Description of the Drawings:

Figure 1 is an overall flow diagram of a method in accordance with the present invention;

20 Figure 2 is a block diagram of a system useable for practicing the method of Figure 1;

Figures 3A through 3P taken together illustrate a flow diagram of a control program useable with the system of Figure 2;

Figures 4A through 4K illustrate various screens presentable by the control program illustrated in Figs. 3A through 3P;

25 Figure 5 is a block diagram of a system intended to receive audio or visual works from a remote source;

Figure 6 is a diagram of a system intended to provide a custom written medium of works obtained from a remote source and in response to establishing a pre-determined credit; and

Figure 7 is a diagram illustrating a system for presenting works on demand from either a local or a remote source.

Detailed Description of the Preferred Embodiments:

5 While this invention is susceptible of embodiment in many different forms, there are shown in the drawing and will be described herein in detail specific embodiments thereof with the understanding that the present disclosure is to be considered as an exemplification of the principles of the invention and is not intended to limit the invention to the specific embodiments illustrated.

10 Systems and methods which embody the present invention enable the user to acquire, for example, digitized audio or audio and video works, which are of interest and which are to be represented either in real time as an audio or an audio/visual work or to be written onto a digital storage medium as part of a sequence selected by the user. Functional capability is provided enabling the user to create one or more composite play or presentation lists which incorporate a
15 plurality of titles or designations of the works in a user selected order. The works could come from a variety of different sources and could include other types of sensory outputs without limitation.

As part of the list preparation process, the user can listen to or view some or all of any of the works. A new list can be graphically created. An existing
20 list can be edited to revise existing works identified in the list, change the order of presentation or to add new ones. Subsequently, the list can be executed and the works performed.

Execution of the list will present the works in the determined sequential order audibly or visually and audibly depending on the nature of the
25 work. Alternately, the works represented on the list can be written to a digital storage medium, such as a CD or DVD for subsequent presentation.

Figure 1 illustrates steps of a method 10 for preparing executable playlists in accordance with one aspect of the invention. In an initial step, selected audio or video elements can be loaded into a digital database, a media inventory, for
30 review and subsequent presentation. Media elements can be obtained from locally

played sources or by wireless signals received from a remote source, such as via an antenna, which are demodulated and stored in digital form in the media inventory.

In the next step, a plurality of playlists can be created by graphically selecting media elements to be entered into a selected list from the inventory. As
5 part of the step, one or more playlist records can be built and stored.

In a subsequent step, the lists in the playlist database can be viewed and various reports concerning the subject list can be created.

In a subsequent step, one or more of the lists can be graphically edited thereupon rearranging items in a list, adding items or deleting items as
10 desired.

Finally, a particular list can be selected and executed. Audio works are presented sequentially, in accordance with the selected list, via audio output transducers, typically speakers. Video works or audio/video works or presented in accordance with the selected list on a video display in combination with speakers.

15 If desired, a selected list or lists can be written to a storage medium such as a CD ROM for later use. If desired, the associated media elements can also be written on to the medium.

A variety of services can be provided to a user while carrying out the steps of the method 10. Analysis can be conducted of the characteristics of various
20 works. For example, beats per minute can be determined and audio works can be sorted accordingly. A list or lists can be created in accordance with a pre-selected tempo or beats per minute.

Sorting or selecting based on other features of audio or video characteristics of the works can also be included. Presentations via a selected list
25 can be controlled based on selected features.

For record keeping purposes, the number of times a given media element is presented or executed can be logged along with date and time information. Reports reflecting any lists created based on any of the above selection features or characteristics can also be printed for invoicing, billing or royalty
30 payment purposes.

Figure 2 illustrates in block diagram form a system 10' for implementing the method 10 of Fig. 1. The system 10' incorporates a programmable processor 12a, for example, a personal computer of a selected variety. Coupled to the processor 12a is a mass digital storage medium 12b, such as a hard disk drive for storage of various databases and programs.

Coupled to the processor 12a is a source of digitized audio or audio/visual input signals such as a CD ROM drive 12c. Media elements or works can also be received wirelessly. Also coupled to the processor 12a are user input devices such as a mouse 12d and a keyboard 12e. Other input devices could also be used without limitation.

Output devices include a display screen 12f of a type conventionally used with programmable processors to present visual display of ongoing programs being executed to the user. A printer 12g is available to provide reports.

Audio and video output devices for media elements include speakers 14a and video output device 14b which can be of a size and quality suitable for the type of works being displayed. Other output devices could also be used.

The hardware components of the system 10' interact in accordance with the user inputs and under the control of a control program 16 stored in one of the storage devices 12b. The control program 16 includes pre-created commands for carrying out the method 10 illustrated in Fig. 1.

The control program 16 is described in a set of flow diagrams illustrated in Figs. 3A...3M. Figs. 4A-4K illustrate various exemplary displays presented on the display unit 12f while the control program 16 is executing.

Fig. 3A illustrates the initial steps in reading a source of digitized works, such as a CD and in selecting either the record sequence, Fig. 3B, 3C, and 3D, the list player sequence Fig. 3H and 3I, or the playlist editor sequence Figs. 3E, 3F and 3G. In step 100 a determination is made if a CD is present in the drive 12c. If so, the program 16 initiates record steps illustrated in Figs. 3B, 3C and 3D. If not, the playlist master database is checked in a step 101. If playlists had previously

been created, the playlist screen sequence is executed, Fig. 3H and 3I in step 102. Alternately the editor sequence can be entered, Figs. 3E, 3F and 3G in step 103.

5 With respect to the record sequence Fig. 3B, during the process of recording information off of the respective CD, in a step 110 an initial screen, Fig. 4A is displayed. If the processor 12a determines in a step 112 that a CD is not present, then a CD missing display, Fig. 4B is presented in a step 113.

10 In the event that a CD is present, in a step 114, information will be read off of it as to track numbers and play times and displayed in a step 116 as in Fig. 4C. In a step 118, the master CD database is checked and if a corresponding record is found, in a step 120 the name of the CD is displayed, as indicated in Fig. 4C. Where tracks off of the respective CD had been previously recorded, in step 122, that information will be retrieved from the track database and displayed also as illustrated in Fig. 4C. The length of each track, recording date, title artist and type of work all can be displayed.

15 With respect to Fig. 3C and 3D, in a step 124 the control program 16 determines whether or not the user has selected a track to play. If so, the selected track is played in a step 126. If desired, as illustrated in a step 126a characteristics of the work such as beats per minute can be computed and displayed for the user.

20 In a step 128, the control program 16 checks to determine whether or not the user requested restart of a work at a specified point. If not the system determines in a step 130 if the user has selected one or more tracks to be recorded. If so, in a step 132, selected tracks are recorded.

25 The system control program 16 also determines whether or not the user has requested a deletion in a step 134 or requested that a new CD be loaded in a step 136, select options in a step 138, a tables function in a step 140 or an exit function in a step 142. In each of steps 136, 138, 140 and 142, the requested respective procedure is carried out.

30 Where a user has selected the edit screen, illustrated in Figs. 3E, 3F and 3G, one or more pre-existing playlists can be retrieved and edited. In a step

150, a playlist selection menu is displayable by the control program 16, in accordance with Fig. 4F. Using the selection menu a particular playlist can be selected and the detail retrieved in a step 152 for the selected playlist. The selected playlist can be displayed for editing as illustrated in Fig. 4G in a step 154. For the convenience of the user, the editor screen, Fig. 4G, illustrates in an upper section, an inventory list of available works currently in inventory which can be selected and entered into the destination playlist, in the lower portion of the display illustrated on Fig. 4G.

As illustrated in Fig. 3F, in a step 160, a user can edit or revise selections or the sequence of selections in the subject list using an editor selection screen as illustrated in Fig. 4H. In the event that the user requested a change in the play sequence in a step 162, an update procedure is executed in a step 164 corresponding to Figs. 3D and Fig. 4I. It will be understood that standard editing-type functions will be available to the user as would be known to those of skill in the art.

In a step 166 the user can request that a particular selected work be played or presented. The works can be restarted in a step 168 at a particular point.

The user can insert a work or a song in playlist in a step 170. With respect to Fig. 3G, a work or song can be moved within the playlist in a step 172. A particular song or work can be removed from the selected playlist in a step 174. The entire playlist can be deleted in a step 176.

In the event that the user desires to select a particular playlist for execution, in a step 102, Fig. 3A, the playlist master database is read in a step 200, Fig. 3H. The playlist player selection menu Fig. 4J is displayed in a step 202. If the user selects a playlist in a step 204, the playlist detail is read from the appropriate database in a step 206. The selected playlist is then displayed, Fig. 4K, in a step 208.

With respect to Fig. 3I, the user can exit the player screen sequence or can request execution of the playlist in a step 210 at the beginning of the list or at a specified work or song. The list is then executed in a step 212.

In the event that one or more reports are to be created using the printer 12g, the process of Fig. 3J can be used to request reports as to existing playlists in a step 230. Alternately, the user can request a report of the existing inventory of media elements in a step 232.

5 Screen selection is carried out in accordance with the process illustrated in Fig. 3K. Updating of data from the record screen is carried out in a process illustrated in Fig. 3L.

10 Fig. 3M illustrates steps associated with carrying out requests for various optional functions. For example, in a step 240 an option screen, Fig. 4D, can be displayed for a user.

15 The user can subsequently in a step 242 change the record options. In the event that the user in a step 244 selects a record directory, the record directory screen Fig. 4E can be displayed in a step 246. The displayed screen can be altered by the user in a step 248. The revised record options can be stored in a step 250 for subsequent use.

20 Fig. 3N illustrates steps of a process wherein the user is able to select and display various tables. In a step 260 an artist table can be displayed and edited in a step 262. In a step 266 the type table can be displayed and edited in a step 268. In a step 270, the CD table can be displayed and edited in a step 272. The track table can be displayed in a step 276 and edited in a step 278.

25 Fig. 3O illustrates the steps in a process of saving the playlist screen, Fig. 4I. In a step 290 the playlist save screen is displayed. In a step 292, if the user has selected to save the existing playlist, the changes are written to the respective database in a step 294. If the user elected to save the new playlist in a step 296, the changes are written to the new playlist database in a step 298. Finally, the user can discard the changes and exit in a step 300.

 Fig. 3P illustrates the steps of a procedure for deleting a selected work or track.

30 Hence, as described above, the system 10' can be used to create new or modified playlists, and execute same thereby presenting the sequence of works

to a user. Alternately, pre-existing playlists can be edited and additional new playlists created which then subsequently be executed.

Those of skill in the art will understand that other functions as illustrated in Figs. 3A-3P will also be provided by the control program 16. Attached hereto is a preferred data structure for use with the flow diagrams of Figs. 3A-3P.

Figs. 5 through 7 illustrate alternate types of list building systems. Fig. 5 illustrates a system 10-1 which is a network based playlist creating and executing system. The system 10-1 incorporates a remote source 20 of works which are to be assembled and played or presented at a user's unit or terminal 22. The unit 20 is intended to be an element or a location accessible via a network. For example, the unit 20 can be a location on an internet or the internet or any other network. It can be accessed via a land line or wireless communication link 24 without limitation.

The system 20 incorporates a processor 20a, and databases 20b. The databases 20b include stored digital representations of a variety of works which can be obtained off of local drives, such as the drive 20c without limitation. The remote system operator has available standard input control devices such as mouse 20d, keyboard 20e or other desired input devices. A display screen 20f of the conventional variety is also provided. The remote system 20 also includes an optional printer 20g for purposes of creating hard copy reports for invoicing, billing or royalty payment purposes without limitation.

The system 20 provides a remote pre-stored inventory which the unit 22 can access via communication link 24. The unit 20 provides supervisory and billing services in response to requests by the end user's unit 22 for access to one or more of the works stored in the inventory in the databases 20b.

Subsequent to the request being authorized, the selected works can be made available to the terminal 22 via the communication link 24. The unit 22 can in turn be used as described previously to create new playlists, edit existing lists and then execute the lists under the control of the local end user. The terminal 22

is especially convenient for the end user in that the works can all be acquired electronically and there is absolutely no need for acquiring and keeping a plurality of CDs.

5 If desired, processor 12a in system 10-1 can keep track of the number of plays and total play time and transmit that information to processor 20a, for billing purposes. Reports producible by the processor 20a include total plays and play time along with invoices for end users. Documentation for royalty payments to the appropriate recipients can also be created. Finally, the reports can list those works by demand or popularity by day, week or month.

10 Figure 6 illustrates a system 10-2 which includes a remote source, such as the remote source 20 and a local terminal 22-1. Terminal 22-1 includes elements similar to the terminal 22 previously discussed. Corresponding elements are identified with the same identification numeral.

15 The terminal 22-1 additionally includes a credit establishing input such as a credit card reader 30. The reader 30 can be used by a user to make a credit card account number available to the terminal 22-1 for billing purposes.

20 Once a credit line has been established, the user will be able to use the terminal 22-1 to create and/or modify one or more playlists into write the selected media elements via an output drive 32 to a removable medium 34 which could be a CD or a DVD.

25 The terminal 10-2 could be located in a business establishment and users interested in obtaining a custom combination of works can access the services of the terminal 22-1 via the reader 30 for purposes of creating and writing the desired sequence of works on the medium 34. Other services made available by the terminal 22 can also be made available by the terminal 22-1 in response to the established credit line.

Additional services that can be made available by the terminal 22-1 include printing invoices via the printer 12g. Report information can be transmitted to the system 20 for billing purposes with respect to the commercial establishment

where the terminal 22-1 is located as well as making royalty payments to appropriate recipients.

Fig. 7 illustrates an alternate system 10-3 which can be used for entertainment purposes in public establishments. The system 10-3 provides jukebox-like services at the terminal 22-2. These are under the supervision and control of remote system 20.

The terminal 22-2 includes a credit establishing device which could be a coin or a bill receiving unit 40 of a type used with vending machines. Alternately, the unit 40 could also accept credit cards if desired.

Upon establishing an appropriate credit via the unit 40, the terminal 22-2 enables a user to select one or more works whose titles might be displayed on the control screen 12f via the input devices 12d, 12e.

The selected works could be resident at the local database 12b or could be acquired from the remote unit 20 via the communication link as discussed previously. The system 22-2, unlike conventional jukeboxes, has an unlimited selection of audio or audio/video works available to it via communication link 24. In addition, for security purposes, the terminal 22-2 does not include an inventory of valuable CD or DVD media. The works could include audio works, such as music, audio/visual works such as advertisements, music videos or others.

The terminal 22-2 presents a rolling playlist on the screen 12f which can be reviewed by the end user or individual selecting the works to be presented. Newly selected or identified works are added at the end of the playlist and are presented via speakers 12a and video output 12b in sequence depending on the nature of the work. Hence, the terminal 22-2 makes possible the presentation of arbitrarily selected works, in an arbitrary order in response to the credit established by the unit 40.

The remote system 20 via the link 24 monitors the works being presented and the frequency thereof. Billing information can be generated for purposes of charging the entity where the terminal 22-2 is located for each work which is presented. Reports can be produced at the system 20 identifying royalties

to be paid to the appropriate recipients based on the works selected for presentation at the terminal 22-2 or for any other desired purpose. It will be understood that the appropriate file type would be used with the appropriate type of work.

- 5 From the foregoing, it will be observed that numerous variations and modifications may be effected without departing from the spirit and scope of the invention. It is to be understood that no limitation with respect to the specific apparatus illustrated herein is intended or should be inferred. It is, of course, intended to cover by the appended claims all such modifications as fall within the scope of the claims.

DATA STRUCTURE

	<u>Table</u>	<u>Field Name</u>	<u>Data Type</u>	
	Master CD	CD Number	Long Integer	Created by the track times
		CD Title	Text 50	
5	Track	CD Number	Long Integer	Link to Master CD table
		Track	Byte	Track number found on the CD
		Artist Code	Integer	Link to the Artist table
		Type Code	Long Integer	Link to the Type table
		Track Title	Text 50	
10		Track Time	Long Integer	Actual time recorded in seconds
		File Name	Text 255	Path/File Name of stored WAV file
		Beats	Integer	Beats per minute
	Playlist Master	Number	Counter	Database assigned key
15		Title	Text 50	
	Playlist Detail	Number	Integer	Link to Playlist table
		Play Order	Integer	Order the track was placed within the playbook
		CD Number	Long Integer	Link to Track table
20		Track	Byte	Link to Track table
	Artist	Artist Code	Counter	Database assigned Artist index
		Artist Name	Text 255	
	Type	Type Code	Counter	Program assigned index to Music Type
25		Music Type	Text 50	

What is Claimed:

1. A system for creating a list of selected titles comprising:
a source of works which may include at least in part, an audio
component;
5 a visual output device;
circuitry, coupled to the source and the output device, for
building a stored inventory of works and for creating a displayable list of titles on
the output device of at least some of the works.
2. A system as in claim 1 which includes an audio output device
10 coupled to the building circuitry and playback circuitry for presenting to the audio
output device an output corresponding to the titles on the list.
3. A system as in claim 1 which includes a device for storage of
digital representations of a plurality of works.
4. A system as in claim 3 which includes circuitry for writing
15 a list to the storage device.
5. A system as in claim 4 which includes circuitry for modifying
a selected list.
6. A system as in claim 5 which includes circuitry for presenting
the works on the modified list to the audio output device.
- 20 7. A system as in claim 2 which includes a video output device.
8. A system as in claim 1 wherein the circuitry includes a
programmable processor.
9. A system as in claim 8 which includes a control program,
executable by the processor, for providing information on the visual output device
25 as to selected characteristics of at least some of the works.
10. A control element usable with a programmable processor
having a digital input device coupled thereto and an audio output device coupled
thereto comprising:
30 commands for reading and storing at least one digitized work;
and

commands for building a displayable list of works.

11. An element as in claim 10 which includes:

commands for presenting a list of works for review.

5 12. An element as in claim 10 which includes commands for modifying a selected list.

13. An element as in claim 12 which includes commands for presenting, sequentially, works on a selected list to the audio output device.

14. An element as in claim 13 which includes commands for reading a digitized work from a wireless source.

10 15. An element as in claim 13 which includes commands for reading a digitized work from a local storage medium coupled to the input device.

16. An element as in claim 12 which includes commands for building an inventory of digitally stored works.

15 17. An element as in claim 10 which includes commands for determining if an authorizing credit has been established.

18. An element as in claim 10 which includes commands for writing at least one work on a selected list to a portable digital storage medium.

19. An element as in claim 10 wherein the commands are storable on a portable digital storage medium.

20 20. A terminal for providing works on demand from a remote source with an inventory of available works, the terminal comprising:

circuitry for receiving digital representations of works from a remote source;

25 circuitry for creating a list of selected works and further circuitry for presenting the works on the list sequentially to an output device on demand.

21. A terminal as in claim 20 which includes devices for storing at least one of the works received from the remote source.

30 22. A terminal as in claim 20 which includes credit establishing circuitry.

23. A terminal as in claim 21 wherein in response to an established credit, a designation of at least one work can be added to the list.

24. A terminal as in claim 20 wherein the receiving circuitry is adapted to interconnect to a wired, at least in part, communications network.

5 25. An apparatus for selecting works stored in discontinuous, non-analog format, the apparatus comprising:

a user operable input device for specifying a plurality of works;

10 circuitry for receiving from a source at least one specified work in a discontinuous format;

control circuitry coupled to the input device and the circuitry for receiving, wherein the control circuitry is adapted to create a visibly displayable sequence of the selected works; and

15 elements for storing commands enabling a user to modify the displayable sequence.

26. An apparatus as in claim 25 which includes a credit establishing device.

20 27. An apparatus as in claim 25 which includes an output device for writing the works in the sequence, in a discontinuous format to a selected medium.

28. An apparatus as in claim 27 wherein the output device comprises a disk drive wherein the medium is removable.

25 29. An apparatus as in claim 25 wherein the source is displaced from the apparatus and the apparatus includes receiver circuitry coupled to a transmission medium, for receipt of the works.

ABSTRACT

A system implementable using a programmable processor includes a plurality of pre-stored commands for building an inventory of audio, musical, works or audio/visual works, such as music videos. A plurality of works can be collected together in a list for purposes of establishing a play or a presentation sequence. The list can be visually displayed and edited. A plurality of lists can be stored for subsequent retrieval. A selected list can be retrieved and executed. Upon execution, the works of the list are presented sequentially either audibly or visually. The works can be read locally from a source, such as a CD, or can be obtained, via wireless transmission, from a remote inventory. If desired, establishment of a predetermined credit can be a pre-condition to being able to add items to the list for presentation.

PATENT APPLICATION DECLARATION AND POWER OF ATTORNEY

I HEREBY DECLARE THAT:

My residence, post office address, and citizenship are as stated below.

I believe I am the original, first, and sole inventor (if only one name is listed) or an original, first, and joint inventor (if plural names are listed) of the subject matter which is claimed and for which a patent is sought on the invention entitled: LIST
BUILDING SYSTEM the specification of which:

☒ is attached hereto;

☐ was filed on _____ as Application Serial No. _____ and was amended
on _____ (if applicable).

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to herein.

I acknowledge the duty to disclose all information to the Patent and Trademark Office known to me to be material to patentability of this application, as defined in Title 37, Code of Federal Regulations, Sec. 1.56.

I hereby declare that all statements made herein of my knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

I hereby appoint the following as my attorneys or agents with full power of substitution to prosecute this application and transact all business in the United States Patent and Trademark Office connected therewith:

Max Dressler	Reg. No. 14,123	Kathleen A. Lyons	Reg. No. 31,852	Keith V. Rockey	Reg. No. 24,713
James E. Gauger	Reg. No. 38,154	Annette M. McGarry	Reg. No. 34,671	Thomas I. Ross	Reg. No. 29,275
Stephen D. Geimer	Reg. No. 28,846	John P. Milnamow	Reg. No. 20,635	Jack Shore	Reg. No. 17,551
H. Vincent Harsha	Reg. No. 18,045	Thomas E. Northrup	Reg. No. 33,268	Joel E. Siegel	Reg. No. 25,440
Allen J. Hoover	Reg. No. 24,103	Lisa V. Mueller	Reg. No. 38,978	Paul M. Vargo	Reg. No. 29,116
Martin L. Katz	Reg. No. 25,011	Paul M. Odell	Reg. No. 28,332		

whose mailing address for this application is:

DRESSLER, ROCKEY, MILNAMOW & KATZ, LTD.
Two Prudential Plaza - Suite 4700
180 North Stetson Avenue
Chicago, Illinois 60601
Telephone: (312) 616-5400

Full name of SOLE or FIRST inventor James D. Hempleman
Citizenship U.S.A. Residence 1660 North LaSalle
Chicago, Illinois 60614

Post Office Address (If different) _____

Inventor's signature: _____ Date: _____
